

BABY WELLNESS

Key points of the research on baby's sleep and Inglesina products.

IDEAL SLEEP FOR BABIES IS:

❖ *in a safe, correct position:*

Experts agree that **newborns should be lying down as much as possible** until they are able to sit by themselves. Correct posture for babies makes natural breathing and digestion easier.

To lower the risk of SIDS, experts strongly recommend laying babies on their backs.

◆ We have made the **Welcome Pad™** for babies to be comfortable lying down in the correct position on their backs for an extended period of time. This new support gives your baby the feeling of being enveloped that they need from their earliest days and helps them keep comfortable in a lying position. It grows with your baby through the adjustable wedge for supporting the legs.

WELCOME PAD™ *inside*

.....

❖ *on a flat, roomy surface:*

Babies must have a hard, flat surface, large enough to not feel constricted and so it can be used as long as possible as they grow.

◆ Our **bassinet** features ample internal dimensions (76 x 37 cm) so you can use it as long as possible, including if your baby is wrapped in a winter muff or wearing a padded jumpsuit. The interior is soft breathable jersey knit, completely removable and washable. The rigid polypropylene shell protects your baby from accidental impact.

.....

❖ *prolonged:*

Your baby's sleep is essential for his or her development, a chance to renew energy and process experiences. To sleep through, **your baby needs a quiet environment that stays the same at home or outside.**

◆ We designed **Quattro, a system that makes it easy to move between outdoors, the car and home** to ensure your baby can keep on sleeping peacefully. The stand-up lets you position the pram safely in your house when returning from a walk and lets your baby sleep in his or her own space, leaving dirt outside.

.....

❖ *at the right temperature:*

Your baby needs support to keep a correct body temperature, staying hydrated in the summer and not too dry in the winter. The general rule is to not cover your baby with more than one layer than an adult would wear in the same environment.

◆ Our prams come with ventilation windows for air to circulate inside the bassinet and keep it cool and ventilated. For the summer, the hood has an anti-UV (UPF5+) sun visor to protect your baby from direct sunlight including when the sun is low in the sky. For the winter, the roof has a double panel to protect your baby from wind and cold. The bottom is designed with a ventilation control system to adjust airflow and temperature inside the bassinet.
